PLEASE DESCRIBE THE TYPE OF WORK TO BE COMPLETED

(Be as detailed as possible to avoid having to provide additional information)

Provide a detailed description of the proposed project:

The objective of the Wenatchee Watershed Knotweed Control and Riparian Restoration project is to remove knotweed and restore native riparian vegetation within control areas. A knotweed inventory was started in 2009 and approximately 80% of the knotweed throughout the watershed has been mapped. Approximately 250 patches covering approximately 3 acres have been identified throughout the Wenatchee watershed. Control efforts started in 2010 with control on 130 patches. This proposal seeks to fund the remainder of the inventory, control, and revegetation within the controlled patches. Knotweed treatments will occur on all known sites, approximately 250 patches (3 acres) in 2012, 2013, and 2014. Any sites found in supplemental surveys will be added to the subsequent years treatment schedule. Revegetation will commence in 2014 and be completed in 2015. Knotweed sites have been located in the following subwatersheds: Nason, Chumstick, Icicle, Lower Wenatchee, Mission, and Peshastin as well as some direct tributaries to the mainstem Wenatchee, such as Derby canyon. Thus, the project area spans Category 2 and 3 subwatersheds which include Major and Minor spawning areas for Spring and Summer Chinook and steelhead. Weed control is identified as a riparian habitat improvement action in the Implementation Schedule. Knotweed is designated as a Class B noxious weed in Washington. In Chelan County, this species is designated for control since distribution is not yet widespread compared to other Counties in the state.

Describe existing project site conditions.

Sites are located throughout the watershed and include residential, agricultural, and natural land uses

Describe any proposed ground disturbing activities. That is, will a tool(s) be used to move earth (soil, rock, gra
