PLEASE DESCRIBE THE TYPE OF WORK TO BE COMPLETED

(Be as detailed as possible to avoid having to provide additional information)
--

Provide a detailed description of the proposed project:

This project will take place to varying degrees on six river systems throughout the Hood Canal; the Union River, the Tahuya River, the Dewatto River and the Big and Little Quilcene Rivers, the Dosewallips, the Duckabush and Big Anderson Creek. Knotweed surveys extend to 50' beyond the ordinary high water line on each bank of each river. Because the uppermost extent of the knotweed in the watershed is to be found, the initial surveys for knotweed must cover the entire watershed. Knotweed treatment will take place at each location on adjacent parcels where knotweed is present and prioritized using the Prioritization of Treatment Areas section of the Hood Canal Regional Knotweed Control Strategy (page 5).

Our primary objectives are:

- to continue with our fourth year of assessment and treatment of knotweed where necessary in the Union and Dewatto and Big and Little Quilcene Rivers,
- to continue our third year of knotweed control and assessment on the Tahuya River,
- continue with the riparian plantings of native conifers and shrubs on the Union, Dewatto, Tahuya and Big and Little Quilcene Rivers,
- to continue assessment and knotweed control efforts on the Dosewallips River,
- and to begin control and assessment on the Duckabush River and Big Anderson Creek.

Our secondary goal is to continue to educate the public about knotweed impacts on salmon habitat.

Describe existing project site conditions.

The landscape along the Tahuya River comprises mostly of rural family residences and large timber company holdings averaging approximately 5 acres or more.

Describe any proposed ground disturbing activities. That is, will a tool(s) be used to move earth (soil, rock, gra

We will be using shovels to plant trees where we have previously treated knotweed.
